TS Design & Surface Feature

TS

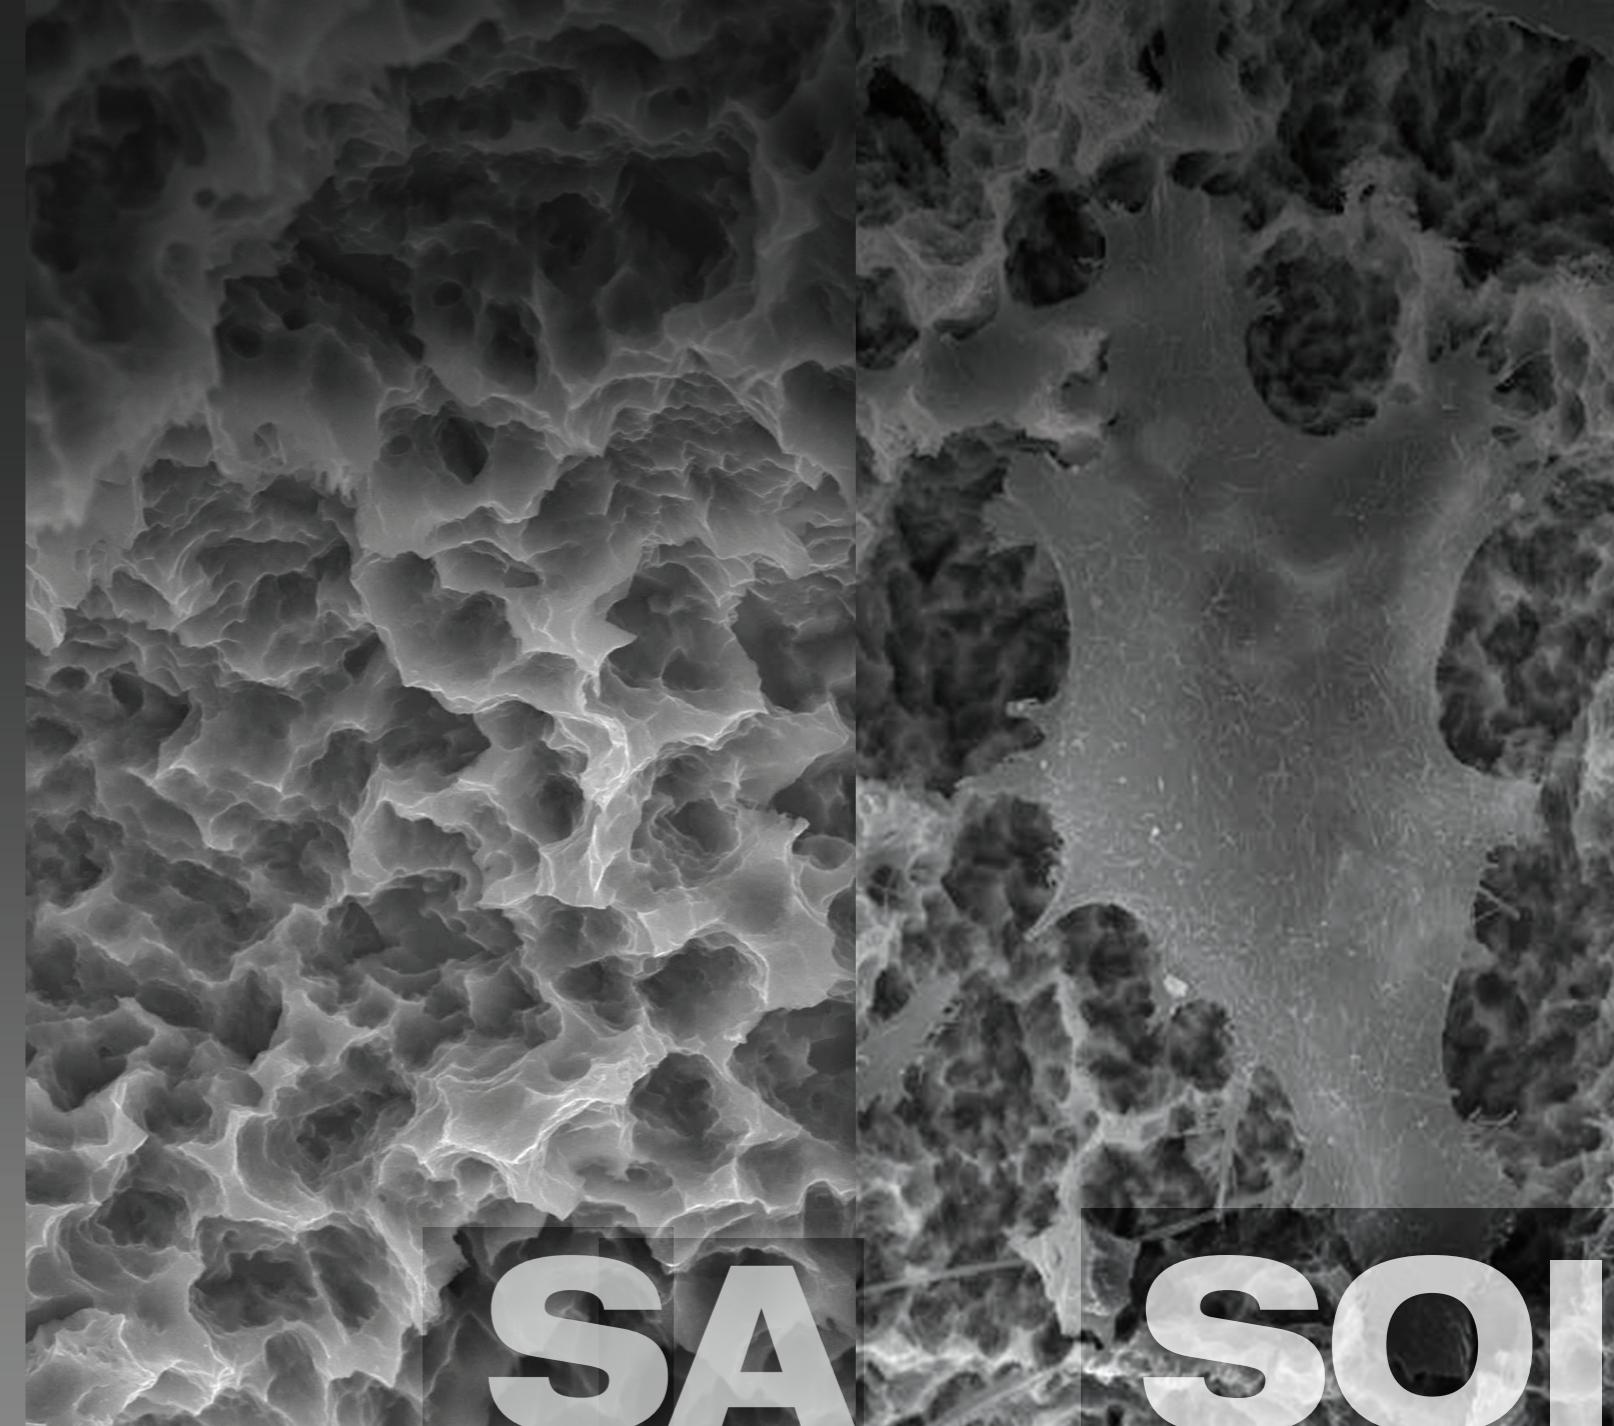

Submerged type implant with an internal hex
11° tapered connection structure

- Connection - Mini / Regular
- Effect of improved initial stability in soft bone with smaller threads in the upper section
- Corkscrew thread & cutting edge
 - Superior self-threading effect for ease of placement path adjustment
 - Enhanced initial stability in soft bone and application of consistent placement torque according to the drill diameter
- Various body shape options available to match the patient's bone quality and clinical condition
 - TSII (straight body) : Easy to adjust placement depth
 - TSIII (1.5° tapered body) Excellent initial stability needed for immediate loading even in soft bone
 - TSIV (6° tapered body) Specifically designed for use in maxillary sinus and soft bone, providing excellent initial stability
- Applicable surface types - SA / SOI

TS packaging color information

SA

SOI

Optimized surface morphology through acid-etching treatment

- Surface roughness: Ra 2.0-3.0 μ m
(Note: the roughness in the upper 0.5mm part is Ra 0.5-0.6 μ m)
- Uniform surface micro-pits of 1-3 μ m
- Surface area increased by 46% compared to resorbable blast media (RBM) treated implants

In-vitro and In-vivo Bone Response

- Osteoblast differentiation and ossification improved by 20% compared to RBM-treated implants
- Initial bone response in a large animal model (mini-pig)
 - Initial stability (removal torque (RT), 4 weeks) improved by 48% compared to RBM-treated implants
 - Ossification (bone implant contact (BIC), 4 weeks) improved by 20% compared to RBM-treated implants

Next-generation surface with hemostatic effect and pH control feature

- Activation of blood clot formation
- Prevention of carbon adsorption in air
- The same surface roughness (Ra 2.0-3.0 μ m) as SA surfaces
- Superior blood wettability with super-hydrophilic surface

In-vitro and In-vivo Bone Response

- Protein and cellular adhesion increased by 130 times compared to SA surfaces
- Initial stability (RT, 4 weeks) improved by 57% compared to SA surfaces
- Surface with the shortest duration of treatment

TSII SA Implant

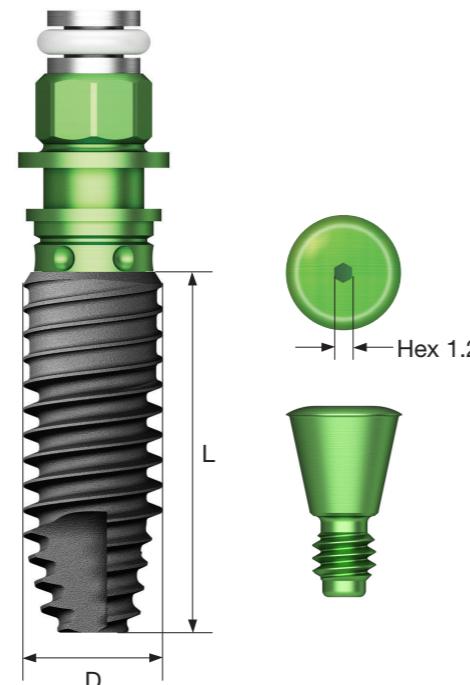

- Submerged type implant with an internal hex 11° tapered connection structure
- Optimal thread design for realization of optimal SA surface
- Straight body design for easy adjustment of placement depth
- Effect of improved initial stability in soft bone by using smaller threads in the upper section
- Superior self-threading effect with corkscrew thread
- Recommended placement torque: $\leq 40\text{Ncm}$
- Implants with a diameter of 4.5mm or greater are recommended for the posterior region with a single case

Nominal diameter may differ from the actual diameter of the product

Note Short implant should be used after a sufficient healing period. It is used by splinting with other implants for prosthesis

TSIII SA Implant

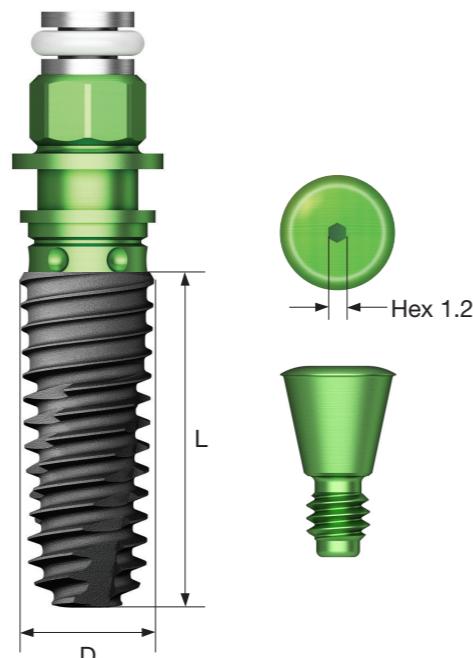

- Submerged type implant with an internal hex 11° tapered connection structure
- Optimal thread design for realization of optimal SA surface
- Tapered body design for excellent initial stability
- Effect of improved initial stability in soft bone by using smaller threads in the upper section
- Superior self-threading effect with corkscrew thread
- Ensuring excellent initial stability needed for immediate loading even in soft bone

Narrow

- Used in tight spaces (narrow ridge)
- Easy angle compensation in anterior region
- Compatible with existing mini abutment (not compatible with cover screws, mounts or lab analogs)

Ultra-wide

- Useful for placement in a fresh extraction socket in the posterior region, immediate placement case or for replacing a failed implant
- Optimized apex design for excellent initial stability in a fresh extraction socket or in 3mm from the bottom
- Recommended placement torque: $\leq 40\text{Ncm}$
- Implants with a diameter of 4.5mm or greater are recommended for the posterior region with a single case

TSIII SOI Implant

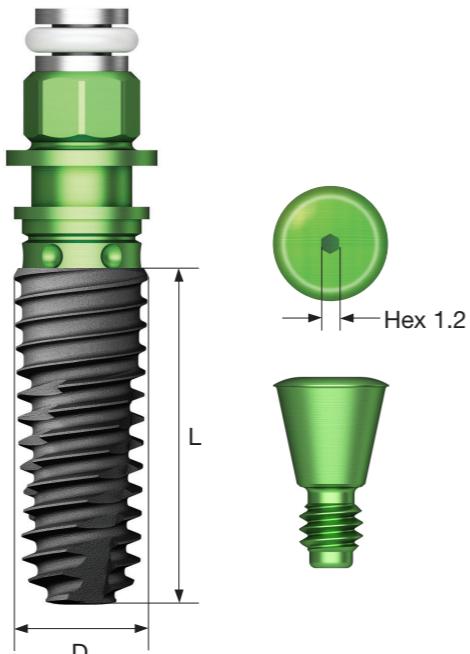

- Submerged type implant with an internal hex 11° tapered connection structure
- Super hydrophilic SA surface with superior blood wettability, coated with K substance (HEPES)
- Super hydrophilic surface inducing fast blood clot formation
- Tapered body design for excellent initial stability
- Effect of improved initial stability in soft bone by using smaller threads in the upper section
- Superior self-threading effect with corkscrew thread
- Ensuring excellent initial stability needed for immediate loading even in soft bone

Narrow

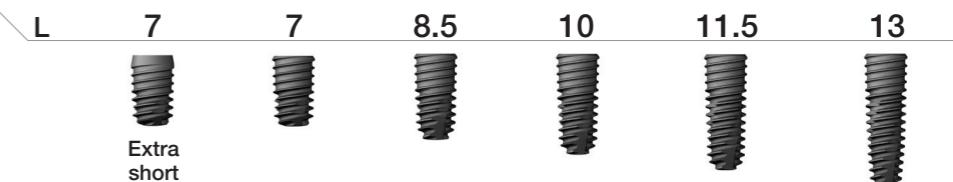

- Used in tight spaces (narrow ridge)

TSIV SA Implant

- Submerged type implant with an internal hex 11° tapered connection structure
- Optimal thread design for realization of optimal SA surface
- Implant for maxillary sinus and soft bone
- Effect of improved initial stability in soft bone by using smaller threads in the upper section
- Superior self-threading effect with corkscrew thread
- Sharp apex design allowing placement even after D4 bone Ø2.0/3.0mm drilling

Ultra-wide

- Useful for placement in a fresh extraction socket in the posterior region, immediate placement case or for replacing a failed implant
- Optimized apex design for excellent initial stability in a fresh extraction socket or in 3mm from the bottom
- Recommended placement torque: ≤ 40Ncm
- Implants with a diameter of 4.5mm or greater are recommended for the posterior region with a single case
- For TSIV implant, considering the fast placement speed because of the large thread pitch, reducing the drilling speed to 15rpm or lower is recommended for placement.

Convertible Abutment Components

Convertible Temporary Cylinder

- Used for producing temporary prosthesis in convertible abutment (Ti Gr-3)
- Tightened with a 1.2 hex driver
- Recommended tightening torque: 20Ncm
- Packing unit : cylinder + Ti cylinder screw

Abutment + Ti screw order code

: product code + TH (ex : GSCTC500TTH)

 Mini

 Regular

: GSFSR (Ø 5.0 / Ø 6.0)					

Convertible Plastic Cylinder

- Used for producing screw-retained prosthesis in convertible abutment
- Used for fabrication of customized prosthesis by casting with nonprecious metal alloys
- Tightened with a 1.2 hex driver
- Recommended tightening torque: 20Ncm
- Packing unit : cylinder + EbonyGold cylinder screw

Abutment + EbonyGold screw order code

: product code + WH (ex : GSCPL500WH)

Port Abutment Components

Port Male KIT

- Components
 - Block out spacer / denture cap connected black processing male
 - Replacement male blue/pink/clear
- Used by selecting the male with adequate retention force for each case
- Using a locator core tool for replacing the male
- Packing unit : 1set

PTCMK

Port Replacement Male

- Retention force : Low retention (Approx. 6N)
- Placement angle compensated up to 20°
- Packing unit : 4ea

PTCM06S

- Retention force : Medium retention (Approx. 12N)
- Placement angle compensated up to 20°
- Packing unit : 4ea

PTCM12S

- Retention force : High retention (Approx. 22N)
- Placement angle compensated up to 20°
- Packing unit : 4ea

PTCM22S

Port Extended Replacement Male

- Retention force : Low retention (Approx. 6N)
- Placement angle compensated up to 20~40°
- Packing unit : 4ea

PTCEM06S

- Retention force : Medium retention (Approx. 12N)
- Placement angle compensated up to 20~40°
- Packing unit : 4ea

PTCEM12S

Port Black Processing Male

- Male used only in prosthesis fabrication process
- Packing unit : 4ea

PTCPMS

Port Male Cap

- Fixed to the denture by connecting with the male
- Packing unit : 1ea

PTCMC

Port Block Out Spacers

- Used for sealing of the space between the abutment and the denture cap when attaching the overdenture and denture cap in the oral cavity
- Packing unit : 20ea

PTCSS

Port Impression Coping

- Pick up impression coping for Locator Abutment
- Using closed tray
- Packing unit : Impression coping + Provisional male 1set

PTCIC

Port Lab Analog

- Lab analog for Locator Abutment
- Packing unit : 1ea

PTCLA40

Port Multi Tool

- Used for placing and removing the replacement male in the denture cap
- Separated into three pieces and used as a hand driver for port abutment

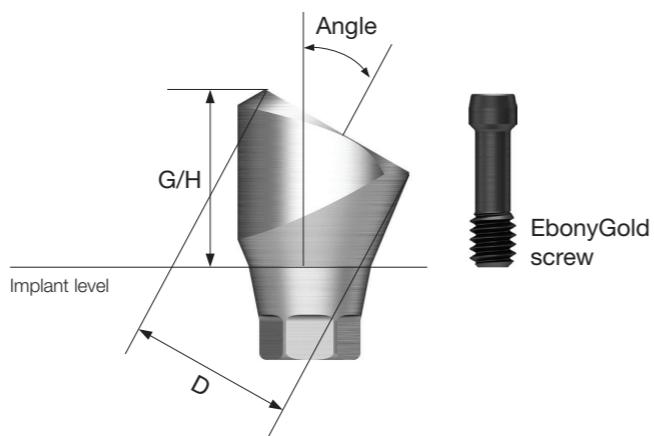

PTCMT

Port Angled Abutment

- Used for placement angle compensation in overdenture
- Abutment level impression
- Placement angle compensated up to 60°
- Tightened with a 1.2 hex driver
- Recommended tightening torque: 20Ncm(mini), 30Ncm(regular)
- Packing unit : abutment + EbonyGold screw

TS Abutment Selector

OneSeal

- Disposable medical devices for internal filling of abutment
- Cut to desired length for use (medical silicone)
- Packing unit : 5ea
- TS Mini : TSSE2250S
- TS Regular : TSSE2350S
- SS Regular : SSSE2650S

- Component accessory that allows prediction of the final abutment specification required
- Only for rigid, transfer and angled abutment
- PSU ring combination allows manual tightening and removal
- Hole for prevention of dropping in the mouth
